## Q3 2025 Fund Commentary

### Market commentary

The global fixed-income market, as measured by the Bloomberg Global Aggregate Index (CAD Hedged), rose during the third quarter of 2025. Credit spreads (the yield differential between securities of similar maturity but different credit quality) shifted in the first two months but narrowed in September.

U.S Treasury yields fell because of weaker jobs data and a U.S. Federal Reserve Board (Fed) interest-rate cut in September. Eurozone yields rose, pressured by fiscal concerns, political instability and a lack of interest rate cuts by the European Central Bank (ECB). Japanese government bond yields rose because of fiscal and political concerns. Yields in Canada fell following a 0.25% interest-rate cut by the Bank of Canada, driven by slower growth and softer inflation.

### Performance

Security selection within global sovereign bonds contributed to performance driven by exposure to emerging markets sovereign debt. Within emerging markets, sovereign and quasi-sovereign debt benefited from increased investor risk appetite and demand for yield. Selection within global high-yield corporate bonds also contributed to performance.

Overweight exposure to the U.K. detracted from performance as U.K. gilt yields rose because of above-target inflation and fiscal worries. Overweight duration (sensitivity to interest rates) in the Czech Republic detracted from performance as yields rose amid inflation concerns. Underweight exposure to agency mortgage-backed securities detracted from performance.

At a currency level, long positions in the Egyptian pound, Brazilian real and Nigerian naira contributed to performance. Overweight exposure to the U.S. dollar contributed to performance as the dollar strengthened.

### Portfolio activity

The sub-advisor added overweight Indian duration based on expectations for yields to narrow amid fading fiscal risks and easing inflation concerns. Overweight exposure to Swedish krona was added on positive momentum. Japanese yen were added because of potential Bank of Japan (BoJ) monetary tightening, persistent inflation and fading fiscal risk.

Emerging market corporate-bond, investment-grade and high-yield credit exposures were increased. Credit spreads ended the quarter at historically narrow levels, but the sub-advisor believes corporate credit could be supported by a strong demand for yield. In emerging markets, higher-yielding currencies, including the Egyptian pound, Brazilian real and Nigerian naira, were increased.

Agency mortgage-backed securities were sold as valuations turned less attractive. The Fund's long-duration position in Peru was sold after outperformance.

Duration in developed markets was reduced, increasing underweight exposure to U.S. Treasuries in favour of the eurozone. Overweight duration in the U.K. was reduced.

## Outlook

The sub-advisor continues to monitor inflation risks in the U.S. driven by tariffs, relaxed fiscal policies and a weaker U.S. dollar. The U.S. government shutdown has created uncertainty, adding to concerns over tariffs and debt sustainability. Inflation had moderated but remains above the Fed's target. The sub-advisor believes growth expectations and fewer-than-expected Fed interest-rate cuts could support the U.S. dollar.

In the sub-advisor's view (SB), over the long term, the One Big Beautiful Bill Act has the potential to boost U.S. growth, but its tax cuts will likely widen the fiscal deficit. Tax cuts could also push long-term U.S. Treasury yields higher. Higher U.S. inflation, combined with recent interest-rate cuts and higher growth outlook, could increase price pressures. The sub-advisor believes that with resilient U.S. economic conditions and above-target inflation, the Fed won't deliver as many interest-rate cuts as expected.

In the eurozone, the sub-advisor believes the (SB) ECB may need to cut policy rates by March 2026 because of weaker growth, political turmoil in France and euro strength. The BoJ may be holding interest rates steady for the foreseeable future given recent leadership changes within the Japanese government. Germany's increased spending is expansionary for the eurozone, which may also lead to higher long-dated yields.

In credit, the sub-advisor is cautious but does not expect a softening in credit amid the Fed's easing policy and slower U.S. growth outlook. The sub-advisor is optimistic and prepared to act if new risks arise. Credit performance should be the result of selective exposure to specific issuers rather than the amount of credit risk.
